Spinach (Spinacia oleracea)

Spinach is a cool-season vegetable that thrives in colder temperatures. It is a good source of iron, calcium, and vitamin A. It can be grown in a greenhouse or in a cool part of the garden. The leaves are succulent and edible, and can be used in salads, soups, and stews.

Green Chilli (Capsicum annuum)

Green chilli is a popular vegetable that is often used in Asian and Mexican cuisine. It is a source of vitamins A, C, and K. Green chilli can be grown in a greenhouse or in a warm part of the garden. It is a good source of heat and can be used to add spice to dishes.

Onions (Allium cepa)

Onions are a cool-season vegetable that thrive in cooler temperatures. They are a good source of vitamins B and C. Onions can be grown in a greenhouse or in a cool part of the garden. They can be used in a variety of dishes, including soups, stews, and salads.

Cilantro (Coriandrum sativum)

Cilantro is a cool-season vegetable that is often used in Mexican and Thai cuisine. It is a good source of vitamins A, C, and K. Cilantro can be grown in a greenhouse or in a cool part of the garden. It is a good source of flavor and can be used to add a burst of flavor to dishes.

Kims Nature

In my garden, I grow a variety of vegetables that are good for my health. I enjoy the process of growing my own food and the satisfaction of knowing that I am eating healthy.

Where is my Garden?

My garden will be placed along the west perimeter of my garden. There is approximately 10 square metres of grass I can use but I will most likely start out by using 5 square metres.

What Plants am I Growing?

In my garden I am going to be growing green chilies, onions, leeks, eggplants, tomatoes, and spinach. Below is a diagram of how the garden will look like (1m wide, 5m long). The plants are ordered to plant similar plants by each other.

In my garden I am going to be growing green chillies, onions, leeks, eggplant, tomatoes, and spinach. Below is a diagram of how the garden will be look like (1m wide, 5m long). The plants are ordered to plant similar plant by each other.
Green Chilli (Capsicum Annuum)

Green Chillies are a fruit. They actually come in colours other than green such as red, orange, and yellow. Chilli plants produce around 3 - 5 chillies per plant. I will be using the green chillies in curries to help add a stronger spice to them.

Chillies need lots of heat and sunlight to be grown so they shouldn't be planted outside until late spring. They should not be watered often or the chillies will lose their spice. The cost for seeds is free as the seeds from a green chilli can be dried and then used.

Green Chilli Plant
Onions (Allium Cepa)

Onions are a vegetable. They are the bulb part of the plant. They come in various colours such as purple, brown and white. I am going to be pickling the onions and also using them in any food that requires onions. The soil for onions must be loose and be able to drain well. Onions also dry out faster than most other plants so they must be watered very regularly. If the temperature goes below -6 degrees celsius, the plant will die.

Onions cost around $4.75 for a pack of seeds.
